

When a client changes a fabric, how many repetitive updates do you make across your files and documents?

When a client changes a selection, you can update the specification record instead of rebuilding the budget and draft documents.

01 • SPECIFY

Create the product record.

02 • APPROVE

Keep the decision with the record.

03 • ALIGN

Update the specification.

With fewer documents to reconcile after a change, you can keep more attention on the design decision.
