

Bring a supplier page into the project record.

View a product or material on a webpage, then bring its available details and image into Net Atelier in a structured way.

01 Bring available details into a product card.

While you view a product or material online, Product Picker brings the available details and image into a structured product card.

02 Keep the product image with the record.

The product image is included in the structured product card and can be used on the concept board without adding it separately.

03 Start with a board you already have.

The workflow is designed to let a studio import a board and produce a proposal the same day.

Use one current project as your test.

Start your 14-day free trial. Card required; cancel anytime.
\$49/month for one user. Each additional user is \$9/month. A four-person studio pays \$76/month.
