

Less admin. More time for design.

Net Atelier is project workflow software for interior designers. It keeps your concept board, product specifications, budgets, supplier orders, and invoices connected in one project, helping you **reduce admin time, avoid costly data-entry errors, and protect your margin.**

A faster workflow. More confidence in every number.

01 Speed up sourcing with AI.

Product Picker uses AI to **instantly bring a product and its available details** from a supplier or other website into that project's concept board.

02 Protect your margin with current project numbers.

The products on each concept board populate its budget and roll into the master project budget. **Review costs by room, category, or vendor** from the same current project information.

03 Avoid costly data-entry errors when specifications change.

Create the draft proposal, supplier order, and invoice from the same project record. **Draft documents update automatically**; if a document was already sent to a client, Net Atelier asks whether you want to update it.

Try it with a current project.
